I love to work with others to bring beautiful and robust applications to the web

Experience

May 2020–February 2021

Student assistant (HTML/CSS/JS/Python)

KABK, The Hague, Netherlands

- I help and teach students to solve technical issues with their projects
- On longer projects I supervise them on how to break up the work to specific tasks and organise their time and efforts.

July–November 2019

Front-End Development & Design Internship

Studio Harris Blondman, Amsterdam, Netherlands

- Gained a solid foundation into HTML and CSS as well as JavaScript
- Learnt more about how the web works and how to apply: Protocols, servers, data structures

Tech Stack

■ Experienced ■ Familiar

Education

2016–2020

BA Graphic Design

KABK, The Hague, Netherlands

March–June 2015

Front-End Development course

Hackafe, Plovdiv, Bulgaria

2010–2015

English Language School 'Plovdiv'

Plovdiv, Bulgaria

Skills

Languages:

Bulgarian (Native), English (Fluent), Dutch (Basic)

Software:

Adobe Suite (Photoshop, Illustrator, InDesign, Audition, After Effects, Premiere), Excel, Word, PowerPoint

Hobbies:

Calisthenics, Cinema, Cooking, Camping

Projects

2020

Retrieve Github Issues React App

<https://github.com/nedkamburov/github-issues-react>

- Built a React application to asynchronously retrieve issues from any GitHub repository.
- Implemented a few safe nets for incorrect user input, unsuccessful connection to the API and a loader for better UX.

Portfolio Website for Cinematographers

<https://hekatofilmcollective.com/>

- Set up a ProcessWire CMS to let the clients update their content without any hassle.
- Designed and built the front-end
- Developed a calendar system for their events.

Music Archive Website (JavaScript & PHP)

www.chalgarhythms.com

- Aggregated data using BeautifulSoup which was saved into usable CSVs with Pandas
- Utilised ProcessWire (PHP CMS) for all the Back-End content management and front-end rendering
- HTML/CSS/JS Front-End development

Documents Parser (NodeJS)

<https://github.com/nedkamburov/pisma-parser>

- Developed a set of Regex functions to match specific patterns in the text documents
- Wrote a NodeJS application to save the parsed data into a new or already existing .xlsx file
- Built a basic Electron interface for the end user

2019

Asciimator: Videos to ASCII animations (Python)

<https://github.com/nedkamburov/Asciimator>

- Utilised several libraries like openCV, Numpy, PIL to break videos into images, convert each image to an ASCII art and save each frame into separate .txt file
- Created a command line workflow to distill, develop and play video stills with just a few commands
